

**National Interagency Coordination Center
Incident Management Situation Report
Friday, June 14, 2019 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (111) new fires
New large incidents:	2
Large fires contained:	0
Uncontained large fires:**	9
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 14 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires:	6
New large incidents:	1
Uncontained large fires:	4
Type 1 IMTs Committed	1
Type 2 IMTs Committed	1

Woodbury, Tonto NF. IMT 1 (SW Team 2). Ten miles northwest of Superior, AZ. Short grass, brush and chaparral. Active fire behavior with uphill runs, running and flanking. Numerous structures threatened.

Elk, Gila NF. IMT 2 (SW Team 3). Eighteen miles northeast of Aragon, NM. Timber. Minimal fire behavior with backing, creeping and single tree torching. Structures threatened.

Mountain, Tonto NF. Eight miles northeast of Cave Creek, AZ. Short grass. Minimal fire behavior with smoldering and creeping.

Bylas, San Carlos Agency, BIA. Twenty-five miles southwest of Datil, AZ. Short grass and brush. Minimal fire behavior with backing, creeping and smoldering. Structures threatened. Reduction in acreage due to more accurate mapping.

Hells Gate, Coronado NF. Ten miles southwest of Tubac, AZ. Short grass and brush. Minimal fire behavior.

Coldwater, Coconino NF. Previously reported incident. Twelve miles northwest of Strawberry, AZ. Timber and brush. Moderate fire behavior with backing, creeping and group torching. Structures threatened. Last narrative report unless significant activity occurs.

* **Jordan**, Gila NF. Twenty-nine miles north of Pinos Altos, NM. Tall grass and brush. Minimal fire behavior with backing and creeping. Last narrative report unless significant activity occurs.

Predictive Services Discussion: High pressure will begin to restrengthen along the West coast from California north into southeastern Alaska. While strong, the surface thermal trough associated with it will be located further to the east over the Great Basin. The presence of these features will create continued warmer than average conditions west of the Continental Divide. A breezy westerly flow is expected from the Great Lakes region east through New England as a low pressure area over Ontario and Quebec flattens out. Isolated convection will be possible across the higher terrain in Alaska as a weak cold front moves east along the Brooks Range and as a large low pressure area south of Unalaska Island pumps small amounts of moisture into the Chugach, Wrangell-St. Elias and Alaska Range mountains. All in all, the Interior should be pretty quiet weather-wise.

Frequent Spot Fires Across The Line

Weather - Fire Behavior Category

This watchout situation clearly indicates how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- What is your probability of ignition doing? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place or order to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, supervisors etc.) and how you will get good information from that person. (Are you relying on an air attack that is busy with air tankers?)
- Where are you in the burning period? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.
